JULES BOBEUF

Software Engineer

PROFESSIONAL SUMMARY

Software Engineer experienced primarily in java-based environments, database design, cloud migration, and application modernization, I am looking for a Software Engineering opportunity in Europe where I can help businesses build scalable, high-quality, and long-lasting software solutions.
Fluent in French and English, I am open to moving anywhere in Europe. I enjoy working in Agile teams and I am highly motivated to learn new technologies and develop both technical and team management skills.

EDUCATION

Master of Software Engineering
University of Littoral Opal Coast
Calais, France
September 2024 - July 2026

Bachelor of Information Technology
University Institute of Technology
Lens, France
September 2021 - July 2024

WORK EXPERIENCE

Software Engineer - IBM Client Innovation Center - Lille, France
Apprentice through the French "Alternance" program

July 2023 - August 2026

I was recruited by IBM to join a team managing a project for a major client in the automotive industry. My work included:

- Contributed to the modernization of a legacy enterprise application by redesigning core components with Spring Boot, improving maintainability, scalability and performance.
- Developed Proofs of Concept (POCs) to validate technical solutions, assess feasibility, and align proposed architectures with client requirements.
- Supported a cloud migration initiative by upgrading application from Java 7 to Java 8, migrating from IBM WebSphere to Apache Tomcat, and integrating Amazon Web Services solutions such as S3 and RDS.
- Maintained and enhanced a legacy Java web application using technologies such as Struts 1 and Maven, handling ticket resolution, feature evolutions, technical documentation and reverse engineering.

Software Developer - Luminess - Lens, France
Internship

April 2023 - June 2023

I joined Luminess to help them modernize an internal Python/Django web application. My work included:

- Modernizing an internal web application which included the upgrade of internal components, the development of new features such as statistics as well as an entire redesign of the app.
- Collaborating directly with end users through weekly meetings to present progress, gather feedback, and translate business needs into functional improvements.
- Writing a user guide to help application adoption for new users.

SKILLS

- Backend Development: Java, SpringBoot
- Databases: Oracle, PostgreSQL
- Cloud: AWS
- Teamwork: Agile & Scrum methodologies
- Documentation: Writing technical and functional documentation

HOBBIES

- Music: studies at the conservatory and choir for 11 years. Obtained the final diploma in 2019. Classical guitar player since 2009.
- Former E-Sport Team Leader & Player: recruitment, management, organization of schedule. Best rank of the team: 1st European. Best individual rank: 1st/+40 Million.
